

CampusLink Project Overview

- CampusLink is a university freelancing platform that connects students, lecturers, and companies.

Main Features:

- Student-to-student hiring
- Company and lecturer job posting
- Paystack escrow payment system
- Skill-based job matching
- Campus-only verification system

What Has Been Accomplished

- Completed So Far:
 - Project planning and concept development
 - Database design using MySQL
 - User authentication system
 - Job posting and application system
 - Messaging/chat implementation
 - Paystack payment integration
 - Dashboard and UI development using Tailwind CSS

What Still Remains

- Remaining Tasks:
 - • AI-based skill/job recommendation system
 - • Advanced testing and bug fixing
 - • Security improvements
 - • Mobile responsiveness optimization
 - • Final documentation and deployment
 - • Pilot testing within the university

Challenges Faced

Challenges Faced:

- Designing a system for multiple user types
- Integrating secure online payments
- Managing database relationships efficiently
- Creating a responsive and user-friendly interface
- Handling real-time communication features

Solutions

How They Were Tackled:

- Structured the database carefully using MySQL
- Used Paystack API for secure transactions
- Applied Tailwind CSS for responsive design
- Improved debugging and testing during development
- Used modular PHP structure for easier maintenance
